

Dear Perkins & Will Hiring Manager,

2024.01.20

I enjoy the work done by Perkins & Will. Few firms manage to pay similar attention to sustainability and equity while also managing to provide harmony in design and aesthetic excellence. As a young designer approaching the path to licensure, I would be very interested to complete that path at a firm as fresh and appropriate as yours.

In addition to appreciation, I also have several skills and interests that might be helpful to the Perkins & Will team. I have significant experience in the softwares I used at architecture school, namely Rhino3D, the Adobe, and Office suites; and also have professional experience working in contract administration and in design development using Revit (BIM 360)- gained during two consecutive summer internships at Architectural Nexus, Inc. in Salt Lake City. The projects I worked on there were a religious building and a hospital. In addition to the software capabilities expected from a Carnegie Mellon student, I enjoy hand drawing, architecture history, and community-engaged design- topics in which I have experience as significant as my youth allows.

Please let me know what you think of my work and I hope to hear back from you soon. I would be more than happy to collaboratively, creatively, and innovatively, use whatever skills at my disposal to work in a broad variety of projects at Perkins & Will, in Washington or at various locations.

Sincerely,  
Henry
